

VIII. Mini Project – Regional Sales Analytics Across Markets

AIM:

To clean, analyze, and visualize regional sales data across different international markets using Python, Power BI, and Tableau. The goal is to identify market performance, top-selling product categories, and regional revenue contribution to support data-driven business decisions.

DOMAIN:

Business Analytics / Sales Intelligence

PROBLEM STATEMENT:

In a global retail environment, businesses often struggle to compare sales performance across regions due to decentralized reports and inconsistent visualization formats. This leads to difficulty in identifying high-value markets, underperforming product categories, and growth opportunities.

There is a need for a unified analytics system that:

- Aggregates and cleans sales data,
- Visualizes performance differences across regions,
- And provides actionable insights to support strategy and market planning.

OUTPUTS:

Python Outputs:

\$2.30M

Total Revenue

Avg. Product Price
\$845

Category Sales Contribution (%)

Top Products by Sales

Power BI Dashboard:

Tableau Dashboard:

RESULT:

Thus, the given program was successfully implemented.

Regional sales data was cleaned, processed, and visualized using Python, Power BI, and Tableau.
